System
Integrator*

RTC Associates, Inc. has developed the capability to incorporate standard biometric identification hand geometry readers into your existing security system without changes to the Security System software.

Using RTC's General Purpose Interface board, the GPI, you can gain the added security of hand recognition without changes to your existing security system software or wiring. RTC's GPI board verifies both hand data and card data before allowing access through a door.

When set up as a standalone security device it has its own database and past history buffer.

**Plug
and
Play**

FEATURES

- ◆ Integrate biometric technology directly into your existing security system
- ◆ Does not require modification to existing system software or wiring
- ◆ Audible and visual annunciators of current conditions
- ◆ Enclosure can be mounted on wall or pedestal
- ◆ Accountability option available to generate reports that can be printed to a terminal, printer and/or saved to a disk
