

About the Company

RTC Associates, Inc. is able to offer service, products and support for security systems because of a unique mixture of personnel with experience in system design, software design, hardware design, maintenance and system upgrading. RTC is one of the few companies who design both hardware and software enabling us to do system upgrades, retrofits and new systems.

RTC's products are designed using the latest technology to increase system performance, reliability and flexibility while reducing power requirements, installation time and the number of components required to perform specified functions. A substantial cost savings is realized when existing wiring is used for upgrade or retrofit applications. The capability of our products to maintain all access information at the door level provides immediate responses to all access requests.

Integrator*

RTC Associates, Inc. prides itself in its ability and willingness to share its expertise with users, architects, engineers and subcontractors when designing, specifying, evaluating or upgrading access control and alarm monitoring systems. RTC's experience in the operation and control of large integrated security systems enables us to understand the concepts and requirements of such systems. We provide our talents to both small and large users while remaining flexible in our recommendations to insure your security requirements and budgets are met to your satisfaction.

Products

All RTC's products can be integrated to provide a complete access control and alarm monitoring system. Using our modular approach, the user can select multiple remote operator stations, time and attendance, record keeping and historical data reporting capabilities. For facilities where an existing system is installed we normally use the existing wiring to substantially reduce the costs.

Our software and hardware design engineers are willing and able to work with you in specifying and designing custom electronics and software for your system. RTC designs all products in house and with the ability to customize them to your needs.
